

Lucas Lemos

Senior Cloud Engineer — AWS · Distributed Systems · Rust

Divinópolis, Minas Gerais, Brazil lucas.lemos.kaihatsusha@gmail.com
linkedin.com/in/lucas-alessandro-do-carmo-lemos github.com/On0n0k1 on0n0k1.github.io

Cloud engineer with 6+ years building event-driven, multi-region systems on AWS. Designs serverless and containerized architectures — Lambda, API Gateway, SQS, EventBridge, DynamoDB, Aurora, S3, EKS — that sustain millions of events per day with automated failure recovery and zero data loss. Strong across infrastructure-as-code and CI/CD (Terraform, GitHub Actions, GitLab CI), observability (CloudWatch, Prometheus, Grafana), and cloud security (IAM, KMS, Secrets Manager, PGP). Rust and Python specialist focused on low-latency, cost-efficient services, with a track record of mentoring engineers and documenting the platforms he ships.

CLOUD & TECHNICAL SKILLS

AWS	Lambda, API Gateway, SQS, SNS, EventBridge, DynamoDB & Streams, Aurora RDS, S3, Redshift, EC2, EKS, VPC, CloudFront, IAM, KMS, Secrets Manager, CloudWatch, Transfer Family (SFTP)
Architecture	Serverless, event-driven and microservice design, multi-region replication, high-throughput ingestion, dead-letter recovery, REST/gRPC APIs, WebSockets, caching strategy
IaC & DevOps	Terraform, Docker, Kubernetes/EKS, GitHub Actions, GitLab CI/CD, Linux, TDD, Agile, Clean Architecture
Observability	CloudWatch, DataDog, Prometheus, Grafana, metrics, structured logging, distributed tracing
Data & Messaging	DynamoDB, PostgreSQL/Aurora, MySQL, MongoDB, Redis & Redis Streams, Kafka, SeaORM, SQL/NoSQL data modeling
Languages	Rust (Tokio, Axum, Actix, Rocket, Reqwest), Python, TypeScript / Node.js, Go, Java, C
Security	IAM least-privilege, OAuth token flows with automated rotation, PGP, AES, RSA, ECDH, public-key cryptography, ZK-SNARKs / ZK-STARKs, homomorphic encryption (FHE/TFHE)

PROFESSIONAL EXPERIENCE

Senior Cloud / Backend Engineer · Confidential Client (NDA)	Jan 2026 – May 2026
Remote	
- Built high-performance Rust APIs for automated digital-asset trading, cutting execution latency 60% through concurrency tuning, allocation reduction and caching. - Introduced a Redis caching layer that reduced backend load at peak traffic by 40%. - Delivered a Prometheus + Grafana observability stack covering service performance, load and error budgets. - Implemented secure OAuth authentication and payment-gateway integrations, plus real-time asset monitoring pipelines. - Established Rust engineering standards, wrote service and runbook documentation, and mentored junior developers.	
Software Engineer, Cloud Platform · Deckers Brands	Aug 2024 – Dec 2025
Goleta, CA	

- Architected an event-driven, multi-region data platform on AWS Lambda, API Gateway, SQS, DynamoDB Streams and S3, processing 1M+ events/day with automated dead-letter recovery and zero data loss across four global regions.
- Built a high-throughput ingestion and data-access layer on DynamoDB and Aurora PostgreSQL (Rust, SeaORM) sustaining 2,000 req/s with atomic real-time updates, cutting propagation latency and improving cross-service consistency.
- Designed an end-to-end secure file-delivery pipeline with Lambda, S3, Secrets Manager, AWS Transfer Family (SFTP) and PGP encryption, delivering authenticated partner transfers in under 30 seconds and retiring a manual workflow.
- Replaced daily batch jobs with real-time third-party integrations using async Rust (Tokio, Reqwest), OAuth token auth with automatic refresh via Secrets Manager, and retry/backoff handling for transient failures.

Lead Developer · PrivID

Jan 2023 – Jul 2024

Toronto, ON

- Deployed containerized services with Docker and Kubernetes on AWS, tuning resource utilization and horizontal scalability.
- Designed GitLab CI/CD pipelines automating test and deployment, reducing release cycles by 25%.
- Built low-latency Rust APIs for privacy-critical services and implemented zero-knowledge systems (ZK-SNARKs / ZK-STARKs) for verifiable computation.
- Shipped Rust/WebAssembly modules for efficient client-side processing in the product frontend.
- Mentored junior engineers and contributed to a patent-backed system design.

Blockchain Developer · NEAR Foundation

Jan 2022 – Aug 2022

Remote

- Implemented real-time event listeners for on-chain data, ensuring consistency and responsiveness for downstream services.
- Advised partner companies launching Web3 products and contributed feedback and code to the NEAR protocol SDK.
- Designed and delivered Rust training courses, workshops, tutorials and hands-on exercises for external developers.

Full-Stack Engineer · Independent Consultant

Jan 2020 – Jul 2022

Remote · Divinópolis, Brazil

- Deployed Rust services to AWS and Google Cloud for a range of client products.
- Delivered React, Node.js and Rust full-stack features, including WebAssembly libraries for heavy in-browser data workloads.
- Diagnosed and fixed critical client-side JavaScript defects, improving reliability and user experience.

EDUCATION

B.Sc. Computer Science

Faculdade Anhanguera, Divinópolis · 2018 – 2022

Associate Degree, Industrial Electronics Technology

SENAI Anielo Greco, Divinópolis · 2013 – 2014

LANGUAGES

English — Fluent

Portuguese — Native

Japanese — Beginner
